

Front-end Developer Assignment (Junior)

Description

- Part 1. Implement a landing page for a product of your choice using best practices.
- Part 2. Implement basic SPA (Single Page Application) in react for **List Products** and **View Product** pages.

Technical Requirements

Part 1

- Do not use any css framework.

Part 2

- Use React to implement the required functionality.
- Use Tailwind as your CSS framework.
- Use <https://fakestoreapi.com/> as your API.

Deliverables

You have to reply with your suggested solution within 5 days.

- Share your solution source code with us using a github or gitlab repository or as a single file (zip or tar.gz) on any other cloud drive you use.
- Use git during the entire process.
- If you don't manage to finish on time, you are encouraged to send your unfinished project with TODO comments indicating your next steps; it is better than nothing.

Tips

Please consider yourself part of the team while building this app. This means that for any questions, comments, or suggestions we are at your disposal, so please do not hesitate to contact us.

Good luck!
